EXAMINER'S AMENDMENT

1. An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization of this Examiner's amendment was given in a telephone interview with Mr. Vincent Shier on March 14, 2008.
3. The Claims have been amended as follows:
 2. (Currently Amended) An isolated alkaline protease [having] consisting of [an] the amino acid sequence of SEQ ID NO: 1 or an amino acid sequence [having] that is at least 98.1% [homology with] homologous to the amino acid sequence of SEQ ID NO: 1, wherein one or more amino acid residues selected from those located at (a) position 63, (b) position 89, (c) position 120, (d) positions 63 and 187, (e) position 226, (f) position 296, (g) position 304 of the amino acid sequence of [SEQNo: 1] SEQ ID NO:1, or at positions corresponding to these positions, are the following amino acid residues, respectively: (a) serine, (b) histidine, (c) arginine, (d) serine, (e) tyrosine, (f) valine, and (g) serine, and wherein said isolated alkaline protease has alkaline protease activity.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

REASONS FOR ALLOWANCE

4. The following is an Examiner's statement of reasons for allowance:

The applicant has claimed "an isolated alkaline protease consisting of an amino acid sequence wherein one or more amino acid residues selected from those located at (a) position 63, (b) position 89, (c) position 120, (d) position 63 and 187, (e) position 226, (f) position 296, and (g) position 304 of the amino acid sequence of SEQ ID NO:1 are the following amino acid residues, respectively: (a) serine, (b) histidine, (c) arginine, (d) serine, (e) tyrosine, (f) valine, and (g) serine, and wherein said alkaline protease has alkaline protease activity". The instant claimed invention escapes the prior art as the structure is novel and unobvious. A search of commercial databases produced references such as U.S. Patent No. 7,101,698 which teaches "an alkaline protease comprising a modified prepro amino acid sequence region and a mature alkaline protease amino acid sequence region wherein the un-mutated prepro sequence is at least 95% homologous to SEQ ID NO:1..." , however the structure presented in this patent is vastly different from the structure presented in the instant application SEQ ID NO:1. For instance the instant structure has 434 amino acid residues and the patented structure has 206 amino acid residues and they are patentably distinct in the composition of amino acids. Furthermore, as the claims recite the closed language "consisting of" no Terminal Disclaimer is needed since the

structure of the instant application is different from the structure in the copending application (10/820,714). Thus, the claimed invention is novel and nonobvious over the prior art.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hope A. Robinson whose telephone number is 571-272-0957. The examiner can normally be reached on Monday-Friday.
